What is ZenHarmonics?

ZenHarmonics is a collection of binaural beats and meditation music designed to assist individuals in achieving a state of deep relaxation and focus. These audio tracks use specific frequencies to synchronize brainwaves and promote a meditative state.

How does ZenHarmonics Work?

The ZenHarmonics collection utilizes binaural beats, which are two slightly different frequencies played simultaneously in each ear. This creates a third frequency in the brain, known as the "beat frequency," which mimics the brainwaves associated with different mental states, such as relaxation or deep meditation.

By listening to the ZenHarmonics tracks with stereo headphones, the brain is entrained to match the desired frequency, inducing a state of deep relaxation and focus.
